POWDER COATING ALLOY RIMS...

Why powder coating alloy rims is better than spray painting...

The wear and tear of everyday driving can often leave wheels looking dull and damaged. Curb rash, scratches and chips from grit and stones can all have an impact on the condition of your rims. Renuamag offers a full powder coating service for alloy rims.

Why is powder coating better than spray painting?

At Renuamag, we believe powder coating is a superior technique than wet spray painting for the basecoat. Powder coating is superior for the following important reasons;

- Better adhesion as a basecoat (primer),
- Better surface smoothing qualities due to the flowing agents and thickness achieved
- Better performance in the quality test during "Salt spray testing" as per the OEM's.

A large difference between a conventional spray painting and powder coating is that the powder coating process does not entail the use of a solvent to keep the binder and filler parts in a liquid suspension form. This means powder coating has benefits from both a cost and environmental point of view.

The powder coating process...

The powder coating process starts with us stripping off the tyre to leave just the rim, which is then washed to remove any dirt and grit before being chemically stripped of any old paint layers.

Once all mechanical work is completed on the rims we then start the process of coating where the powder coating is the first step.

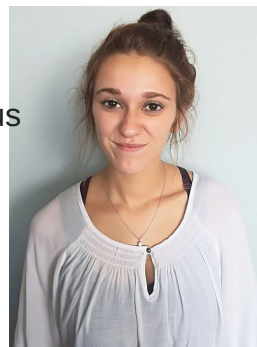

Air is forced through a nozzle over an electrode, which gives the powder a positive charge. The item being coated is grounded so the positive powder particles are attracted to it. This ensures optimum usage off the powder applied. The coated rim is then conveyed through an oven to cure the powder where it undergoes a molecular change where each particle bonds with surrounding particles to form a single, seamless skin over the rim.

This coating is off superb quality and very durable and is able to withstand extreme conditions.

We have found that alloy rims that have been powder coated stand up better to chips from stones and other common road damage.

To find out more about our powder coating service call us on 011 452 6256 or email us at reception@renuamag.co.za

MEET THE TEAM.

Nicole Fourie - Receptionist.

Now you can put a face to the friendly voice that answers when you call. Nicole joined us in October 2016. Able to assist you with quotations, queries or direct you in the right direction, Nicole is clued up and eager to assist you! Put her to the test and give her a call for professional, above average service.
